</table>
Tobacco-Associated Visits to the ED*

Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population and then converted to percentages. For example, in the 95814 zip code, after adjusting for size and age of population, there were approximately 713 tobacco associated visits to the ED for every 10,000 people. Data source: OSHPD, 2010.
Tobacco-Associated Hospitalizations*

*Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population and then converted to percentages. Data source: OSHPD, 2010.
% Current Smokers Among Adults Age 18 or Older*

*Because of small population sizes, data are not provided for Rio Linda (95673), Belmont Estates (95841), Oak Park (95817), Elmhurst/Tahoe Park (95820), Meadowview (95832), Florin (95828), or City Farms/Fruitridge Manor (95824). Source: CHIS 2005, 2007-2009.
Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population and then converted to percentages. For example, for every 10,000 people living in the 95814 zip code, there were 459 diabetes-associated visits to the ED.

Rates are adjusted to account for differences in the population size and the age profiles of the communities. The rates were estimated per 10,000 population and then converted to percentages. Data source: OSHPD, 2010.

*Diabetes-Associated Visits to the Hospital*

- County rate = 1.90%

* Rates are adjusted to account for differences in the population size and the age profiles of the communities. The rates were estimated per 10,000 population and then converted to percentages. Data source: OSHPD, 2010.
Diabetes-Associated Mortality*

*Rates are adjusted to account for differences in the population size and the age profiles of the communities. Mortality was calculated as number of deaths per 10,000 population. Because the numbers are small, they were not converted to percentages. Source: CA DPH, 2010.
Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population.

Hypertension-Associated Visits to the Hospital*

*Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population. Source: OSHPD, 2010.
Hypertension-Associated Mortality*

Rates are adjusted to account for differences in the population size and the age profiles of the communities. Mortality was calculated as number of deaths per 10,000 population. Because the numbers are small, they were not converted to percentages. Source: CA DPH, 2010. NOTE: County –level data not provided.
Stroke-Associated Visits to the ED*

*Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population. Source: OSHPD, 2010.
**Stroke-Associated Hospitalizations***

*Rates are adjusted to account for differences in the population size and the age profiles of the communities. Rates were estimated per 10,000 population. Source: OSHPD, 2010.
